CASE STUDY

Farmer Boys Fast-food Kitchen Training

VR kitchen training that speeds up onboarding, reduces errors, and ensures consistent food quality in fast-paced restaurants.

Platform: VR

Project overview

VR kitchen training that speeds up onboarding, reduces errors, and ensures consistent food quality in fast-paced restaurants.

About the project

OneBonsai helped Farmer Boys improve kitchen training with a VR module that simulates burger and breakfast preparation. The solution reduced onboarding time, boosted consistency, and minimized waste, ensuring faster, higher-quality service in a fast-paced restaurant environment.

Challenge

Inconsistent and Inefficient Training in Fast-Food Operations

Farmer Boys, a Califoria-based restaurant chain, needed a more effective way to train kitchen staff. Traditional onboarding methods were inconsistent, leading to errors, food waste, slower service, and difficulties in maintaining quality standards during peak hours.

> *"Onboarding was inconsistent, leading to errors, food waste, and slower service."*

Solution

VR Kitchen Training Simulator

OneBonsai created a VR training module replicating the full burger and breakfast preparation process in a virtual kitchen. Trainees can practice step-by-step procedures for cooking, assembly, and quality control in a safe, repeatable environment.

Approach

Realistic and Scalable Simulation

The VR environment mirrored real kitchen workflows, allowing employees to build muscle memory and confidence before working in a live setting. The training was designed to be scalable, so multiple staff members could be onboarded quickly and consistently across different restaurant locations.

> *"I learned how to prepare orders quickly without wasting ingredients."*

Outcome

Faster Onboarding and Improved Consistency

The VR training reduced onboarding time, improved order accuracy, and minimized food waste. Staff became more confident and efficient, leading to higher-quality service and stronger operational performance across Farmer Boys locations.

> *"The VR kitchen reduced onboarding time and improved food quality consistency."*
